What's new:

**Developed by LAIKA. Available on Oculus Rift & Gear VR.
Released May 1st, 2016 The Body VR The Body VR: Anatomy**

Viewer, developed by Australian gaming studio Laika, pushes you so far into a lifelike virtual reality experience that it encourages you to touch, feel, and experience a virtual representation of real human anatomy that you have probably never seen before. The Body VR begins with you laying down in a multi-layered, very lifelike but fully articulated virtual body, and then you are placed into the main menu screen where you have some added tools and controls to let you explore your new 'body'. Click to enlarge Click to enlarge Click to enlarge You can choose from a variety of viewing modes including maximum realism, and less than maximum realism. You can also choose to turn on different eyes, nose and mouth (more or less) to further differentiate from a plain VR human body. Optional touching at various organ locations and viewing of 3D models in a mixed reality are also available. Click to enlarge Every organ in the body is represented, both open and detailed, including the stomach, lungs, kidneys, kidneys, bone, brain, eyes and facial features (smile!). While every part of the body is in 3D, much of the detail is placed on-screen with artful watercolor-style illustrations or coloured illustrations. A very detailed zoom function is also available, as well as an 'Expert' mode where all the detail is enlarged. Click to enlarge Click to enlarge You can also access a 3D, graphically rich museum-style gallery of human bones, muscles and organs, over 300 health-related 3D models and images, and encyclopaedic information about the human body. Stylize your inside-body imagery like you want it, and there is plenty of it in the form of appropriate skin tones, hair colour, clothing and colours for each location of the body. Note: You can save as many different file types as you want from the various viewing modes and organ locations; but you cannot save if you only turn on one place. As you explore and add items to a location for viewing, that additional location will

contain a very exact and detailed rendering of it. Eventually, you might get to a very complex location that takes a long time to render, during which time other objects (
